

Web-based recording for advertisement panel locations.

Road Advertisement Panel Control (RAPC) is the free web-based advertisement panel information system developed by DC Water and Environment. RAPC is developed for the Ministry of Public Works and Housing (MPWH).

**Application**

A web-based system to register the advertisement panels on the roads. Cross-platform application written in PHP. Uses a GIS component based on mapserver to visualize the panel locations. Standardized reports allow to easily create Advertisement panel installation with cost.

**Profile**

Easy to use

- Simple web interface that is easy to understand and operate
- Integrated HTML help

Flexible

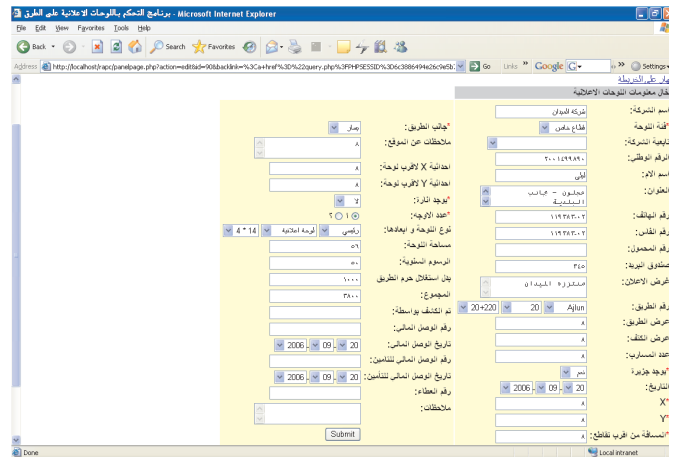

- Fully internationalized, Arabic and English interfaces are available, other languages can be added easily
- Open Source: Full source code is available; easy to extend
- Works with different database backends (e.g. ORACLE with spatial support, PostgreSQL)
- Platform independent, tested on Windows and Linux
- Works with many browsers and web servers
- Comes with loader and export tools for spatial data.
- Client-server and standalone installations are possible

Cost-effective

- Built on Open Source software like PHP
- Freely available on the internet
- Central administration, users can be connected e.g. through dial-up connections
- Low hardware requirements

Powerful

- Full basemap information available
- Standard monitoring reports
- Tabular reports
- GIS-based, navigate using route link number.
- Different accounts for different users
- Standard map printing.
- Easy configuration, and adjustment.
- Direct link with the Road Information System on the Ministry of Public Works and Housing of Jordan

**RAPC**
